

EV Adoption Analysis Report (2020–2024)

Overview

The EV Adoption Analysis Dashboard provides insights into electric vehicle adoption trends between 2020 and 2024. The dashboard focuses on sales performance, vehicle specifications, customer satisfaction, adoption reasons, EV type distribution, brand performance, and country-wise adoption.

Key Performance Indicators (KPIs)

Total EV Sales: 10,000
Average EV Price: \$40.79K
Average Range: 283 KM
Total CO₂ Savings: 21M KG
Average Satisfaction Score: 4.0 / 5

Dashboard Analysis

EV Adoption Trend (2020–2024): EV sales increased steadily from 2020 to 2023 and peaked in 2023, followed by a slight decline in 2024.

EV Adoption by Reason: Environmental Concern, Lower Running Cost, and Government Incentives are the main drivers of EV adoption.

EV Type Distribution: Battery Electric Vehicles (BEV) represent the largest share of EV adoption.

Battery Capacity vs Driving Range Analysis: Higher battery capacity generally results in greater driving range. Tesla and Lucid Motors lead in range performance.

Top Brands by Average Range: Tesla, Lucid Motors, Mercedes-Benz, Kia, and Nissan are the leading brands.

Top 10 Countries by EV Adoption: China, the United States, Germany, India, and the United Kingdom are among the leading countries.

Customer Satisfaction Score: Average satisfaction is 4.0 out of 5.

Key Insights

- EV adoption peaked in 2023.
- BEVs account for the largest share of EV adoption.
- Environmental concerns are the leading adoption driver.
- Tesla provides the highest average driving range.
- China and the United States lead EV adoption.
- EV adoption contributed approximately 21M KG of CO₂ savings.
- Customer satisfaction remains high at 4.0/5.

Conclusion

The dashboard highlights strong EV adoption growth between 2020 and 2024. Tesla leads in range performance, BEVs dominate the market, and EV adoption contributes significant environmental benefits.
